Robot Consulting President Hidetoshi Yokoyama gives special lecture at the University of Electro-Communications' "Advanced Lectures on Venture Business"

Lectured about "Differences between Japanese and the US Startups" to 60 Graduate Students

Robot Consulting Co., Ltd. (Minato-ku, Tokyo. Chairman and president Hidetoshi Yokoyama), a provider of AI services mainly for legal tech, spoke at the University of Electro-Communications' "Advanced Lectures on Venture Business" on Wednesday, November 27, 2024, to approximately 60 graduate students attending the lecture.

In this lecture, students learned the basics of understanding venture businesses and studied various management practices both in person and online. Robot Consulting chairman Yokoyama spoke based on his own experience about the reality of startup management, from its founding to the current status of the company which is preparing to go public on the US market.

During the Q&A session, the students asked questions on various issues and concerns, such as "How to differentiate our labor DX service from the 'Robot Lawyer' we are developing to make legal consultation more accessible" and "How authoritative AI is," and their passion to learn was impressive. Furthermore, we received encouraging feedback from the students who will lead the future as follows; "Through this class, I was able to gain a deeper understanding of how I should think about my role in society in the age of AI," "I realized the importance of having a sense of ethics and a future-oriented approach, rather than just learning AI technology," and "I felt that I need to recognize AI, such as ChatGPT, which is beginning to blend into our daily lives, and

have the ability to distinguish it from my own will.”

Robot Consulting will continue to develop innovative AI-based technologies and services to realize the “Democratization of Law.”

◆About Robot Consulting Co., Ltd.

Robot Consulting develops and provides AI services that mainly deal with legal tech under the philosophy of “Democratizing the Law.” The “Robot Lawyer” that utilizes AI, including LLM (large language models) currently under development, aims to realize free legal advice around the world.
